

Panel and Center Panel with Open Slot Center

Slotless Panel

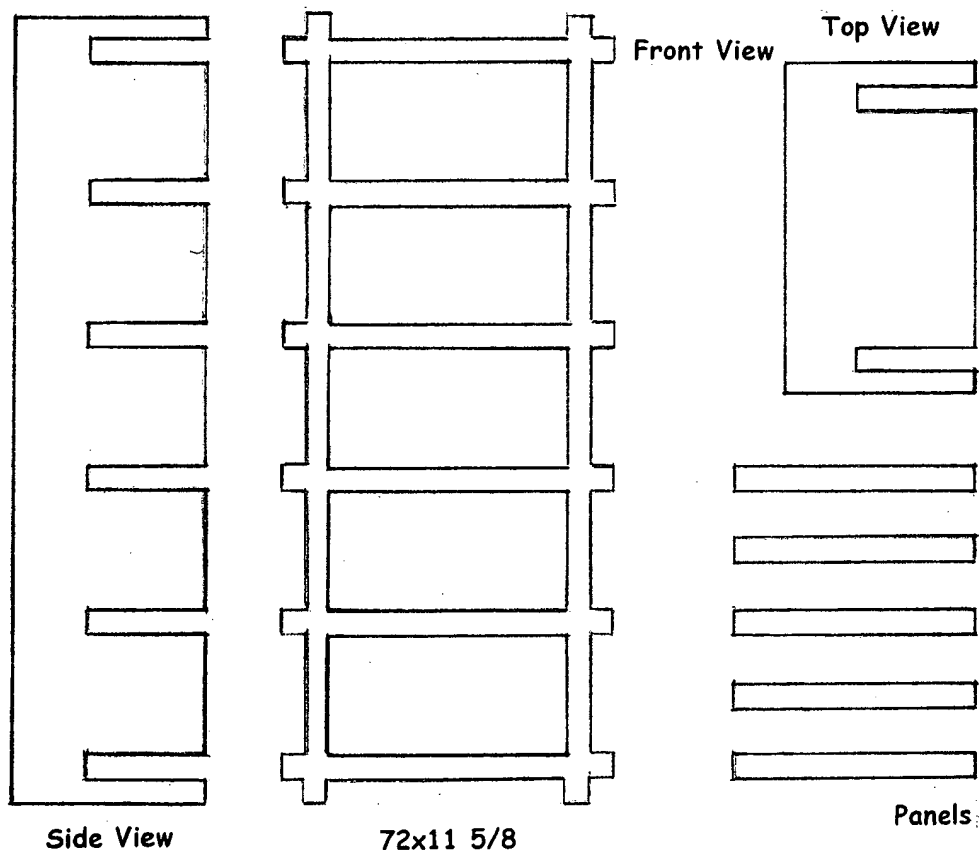

Plastic Connections

My plastic side-frames, panels and dividers are adjustable and ready-to-assemble without the need of tools. All three side-frames and dividers are multi-functional meaning a person can build two to four or four to seven storage and furnishings ideas by using one pair of side-frames or two or more dividers. The longer side-frames have three different heights but the widths and depths are the same. The smaller dividers have different heights, widths and depths. The panels for the longer three side-frames are wide and spacious.

Here's a example of their multi-functional uses:

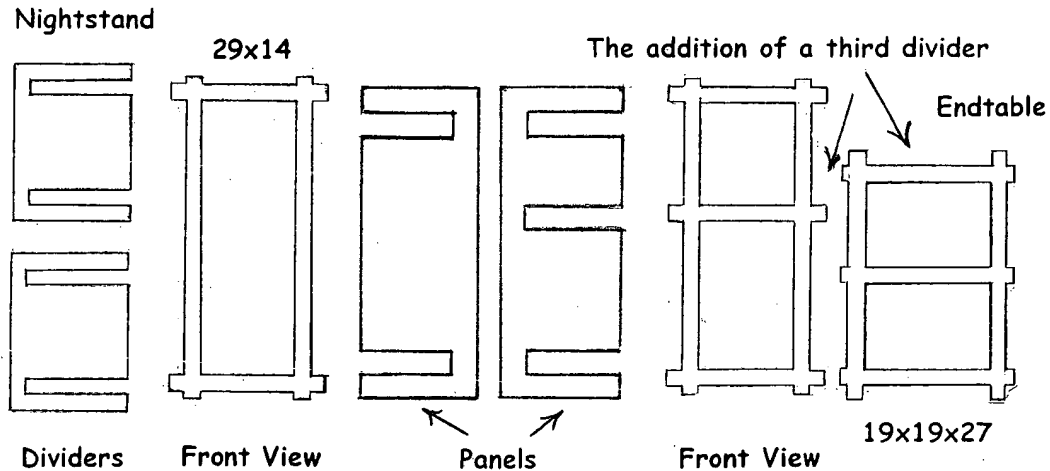

Entertainment Stand/Store Display Rack/ Storage Tower/Kitchen Storage Rack/Towel Tower/Linen Tower

What you need to build any of the storage and furniting ideas requiring the 72" long side-frame is two side-frames and five panels. Simply laid side-frames on their edges and slide panels into the open slots on each level. Then its your choice to either stand the side-frames up for a storage tower or laid them on their side to be use as a storage rack.

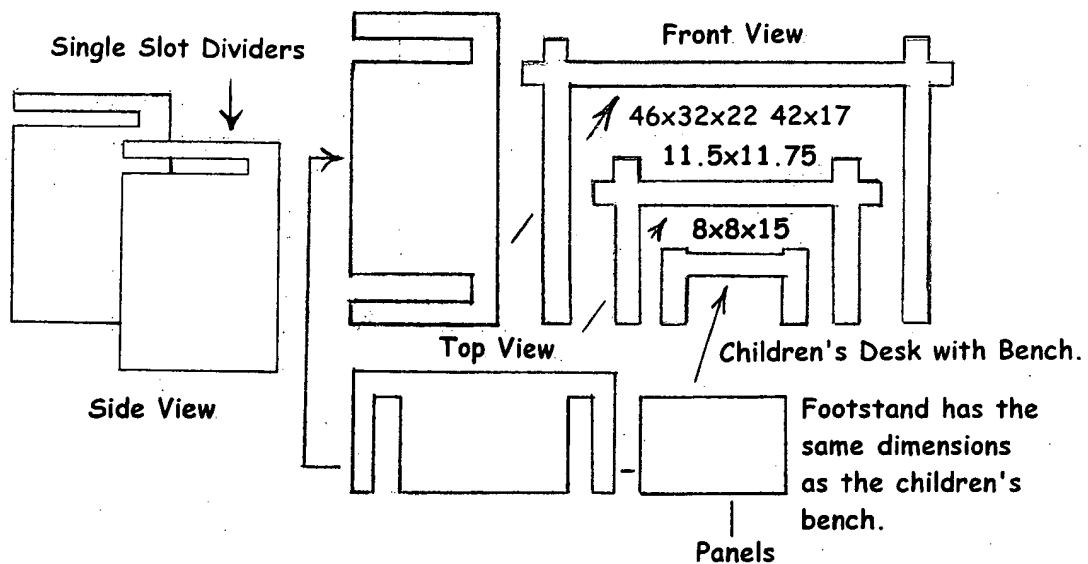

Nightstand/Nightstand with middle shelf/Endtables

Using smaller dividers you can build a simple nightstand or a nightstand with a middle shelf by placing divider flat down and sliding two panels upright on both ends into the divider. Then slide-in another divider on top. To add a middle shelf simply use the panels with the open slots in the middle and simply slide-in a third divider for the shelf.

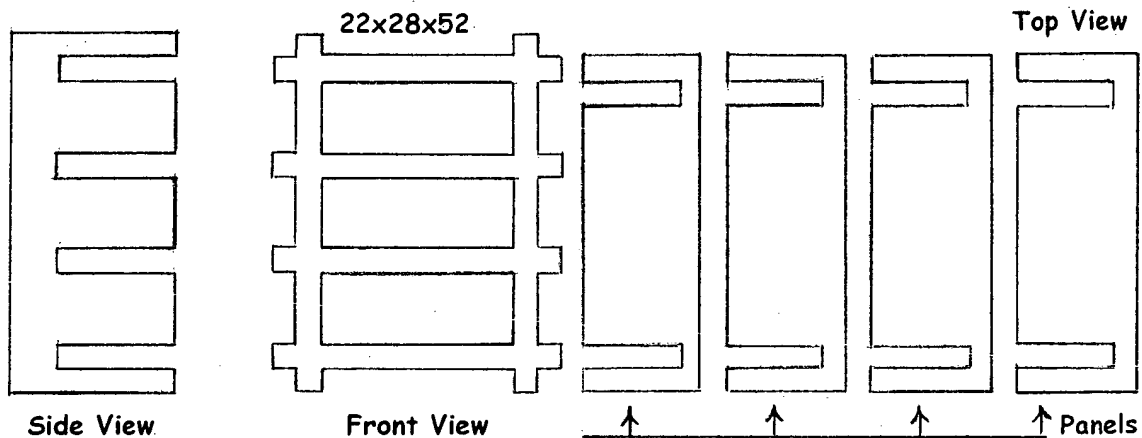

Adult Desk/Children's desk with bench/Footstand

This setup requires using the dividers with the single slot on the top. Using different sizes to build the adult desk and children's desk with bench, simply laid dividers on their edges, slide-in panel.

Notions Shelf/Mechanic's Tool Shelf/Gardening Shelf

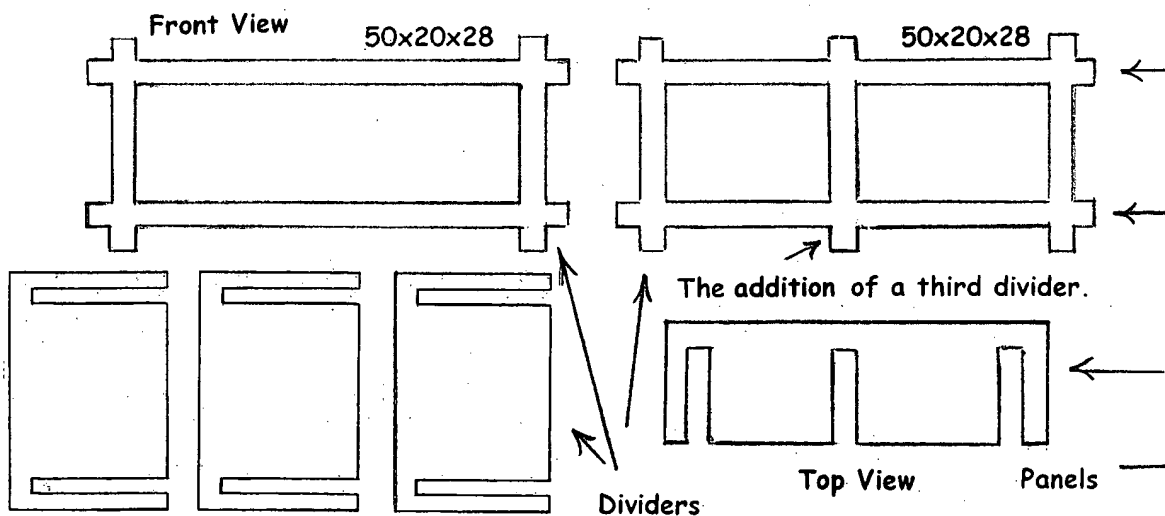

Need a notions shelf? A mechanic's tool shelf? How about shelves to place your potted plants? A person can build any one of these shelving ideas using the 30" side-frames. Laid side-frames on their edges and slide-in panels.

Coffeetable/Low level bookcase for books and magazines

Two dividers and two panels are needed for this coffeetable. Laid dividers on their edges and slide-in panels on the top and bottom.

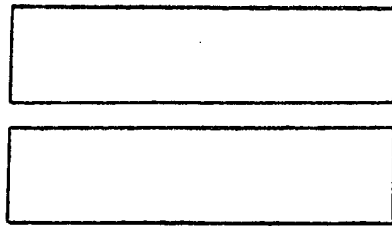

For a low level bookcase for books and magazines do the same as for the coffeetable but use a panel with an open slot in the center and turn divider in the opposite direction.

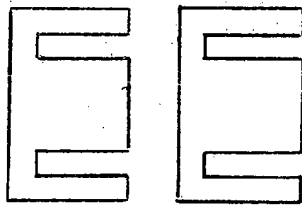

Planters/Children's small storage boxes (three sizes)

For planters and children's storage boxes, use two small dividers and turn them on their edges. Slide-in two panels.

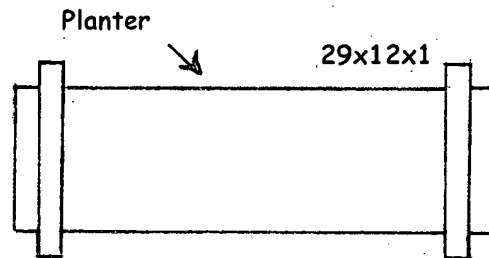

Slide-in two panels.
